ANNUAL
DESCRIPTIVE
CATALOGUE

OF
BULBS

AND OTHER
FLOWERING
ROOTS

FOR
FALL PLANTING

No. 15
JOHN ST.
NEW YORK.

Collections of Beautiful Bulbous Roots.

These assortments are made up only of fine and standard sorts that are known to give satisfaction.

No. 1. PRICE, \$1.50. ASSORTMENTS of

- | | |
|--|------------------------------|
| 6 Fine Named Double and Single Hyacinths,
for pots, glasses or open border. | 3 Poet's Narcissus. |
| 2 Polyanthus Narcissus. | 1 Crown Imperial. |
| 20 Early Tulips. | 6 Scilla Sibirica. |
| 40 Fine Mixed Crocus. | 3 Spanish Iris. |
| 3 Bulbocodium vernum (spring flowering). | 3 Jonquils odorus rugulosus. |

If wanted by Mail, add 38 cents for Postage.

No. 2. PRICE, \$3. ASSORTMENTS of

- | | |
|---|------------------------------|
| 12 Fine Named Double and Single Hyacinths,
for pots, glasses or open border. | 6 Poet's Narcissus. |
| 15 Fine Double Tulips. | 6 Bulbocodium vernum. |
| 40 Beautiful Named Early Tulips. | 12 Scilla Sibirica. |
| 60 Fine Mixed Crocus. | 1 Crown Imperial. |
| 3 Polyanthus Narcissus. | 6 Spanish Iris. |
| | 6 Jonquils odorus rugulosus. |

If wanted by Mail, add 75 cents for Postage.

No. 3. PRICE, \$6. ASSORTMENTS of

- | | |
|---|-------------------------------|
| 24 Fine Named Double and Single Hyacinths,
for pots, glasses or open border. | 2 Crown Imperials. |
| 100 Fine Mixed Crocus. | 12 English Iris. |
| 100 Beautiful Named Early Tulips. | 12 Spanish Iris. |
| 24 Fine Named Double Tulips. | 15 Bulbocodium vernum. |
| 12 Polyanthus Narcissus. | 25 Scilla Sibirica. |
| 12 Poet's Narcissus. | 12 Jonquils odorus rugulosus. |
| | 12 Chionodoxa Lucillae. |

If wanted by Mail, add \$1.50 for Postage.

Cases of Assorted Bulbs,

Suitable for Outdoor Planting or the Greenhouse, Containing

200 Fine NAMED HYACINTHS, as follows:

- | | |
|--|--|
| 30 Double Red and Pink Hyacinths in 6 sorts. | 40 Single Red and Pink Hyacinths in 8 sorts. |
| 20 " White " 4 " | 20 " White " 4 " |
| 20 " Blue " 4 " | 40 " Blue " 8 " |
| 10 " Yellow " 2 " | 20 " Yellow " 4 " |

100 Fine MIXED HYACINTHS, as follows:

- | | |
|--------------------------------|----------------------------------|
| 20 Mixed Single Red Hyacinths. | 15 Mixed Double White Hyacinths. |
| 10 " Double Red " | 35 " Single Blue " |
| 10 " Single White " | 10 " Double Blue " |

500 Fine TULIPS, as follows:

- | | |
|-------------------------|--------------------------------|
| 200 Mixed Early Tulips. | 50 Duc van Thol Tulips. |
| 100 " Double " | 100 Named Tulips in ten sorts. |
| 50 " Parrot " | |

OTHER BULBS, as follows:

- | | |
|-----------------------------------|---------------------------|
| 500 Assorted Crocus, five colors. | 50 Mixed Spanish Iris. |
| 25 Mixed Polyanthus Narcissus. | 10 Mixed Crown Imperials. |
| 50 Single Poet's Narcissus. | 100 Campenelle Jonquils. |
| 50 Mixed Double Anemone. | 100 Scilla Sibirica. |
| 50 " " Ranunculus. | 50 " Campanulata. |
| 50 English Iris. | |

Price, \$25 per Case.

J. M. THORBURN & Co.

CATALOGUE OF

Bulbs and Flowering Roots.

Autumn, 1896.

August 12, 1896.

MANY of the finest Flowers are produced from Bulbs and Bulbous Roots, and they would be more widely grown were it not for the fact that they must be planted some time before the bloom appears, and cannot, like flowering plants, be sold in a blooming condition, save in the case of bulbs which have been "forced" into flower in pots, out of their natural time of blooming, and are thereby rendered useless for outdoor planting. All the hardy portion of the class (and the best portion is hardy) must be planted in the autumn, and will bloom in the following spring and summer. It is a common occurrence in the spring to have inquiries and even orders for Hyacinths, Tulips, etc., from friends who have seen the beautiful display of these flowers in parks and private grounds. It is, of course, out of the question to supply them, save in the fall.

A most brilliant and effective display can be had by massing like or contrasting colors in varieties blooming about the same time. We shall be pleased to name proper varieties for this purpose, when desired.

Directions for culture will be found under the various headings.

Our Bulbs are all selected, from the best growers, and very different from the cheap "case" bulbs offered at very low prices. When parties are unacquainted with the different varieties, we shall be glad to make a suitable selection for any desired purpose. All Bulbs noted as hardy may be planted as late in the fall as the ground can be worked, but October and November are the best months for planting.

Orders for Bulbous Roots can be forwarded to us from August to November, inclusive. Those received before the first of October will be sure of being filled as ordered; after that time the supply of many varieties is frequently exhausted. It is best to order at once on receipt of the Catalogue; the Bulbs will be sent in proper time for planting.

Address all orders and remittances to

BERMUDA EASTER LILY.

J. M. THORBURN & CO.,
15 John Street, New York.

HYACINTHS.

Directions for Culture.

FOR PLANTING HYACINTHS IN THE OPEN GROUND, the preferable season is October and November, but they can be set out at any later time, as long as the ground is open and the bulbs remain sound.

The best compost for their culture is the following: One-third river or sea sand, one-third well-rotted cow manure, and one-third good garden mould; or, where the soil is naturally light, well-rotted cow manure liberally intermixed is all-sufficient. The beds composed of the above compost should be well dug to a depth of fourteen inches, and raised from two to four inches above the level of the walk. The bulbs should be planted evenly about six inches deep (to the bottom of the bulbs) and from five to six inches apart; if planted at uneven depths they will not bloom at the same time, but irregularly. Care must be taken not to press the earth too firmly around and over the bulbs; some successful gardeners follow the plan of setting each bulb in a handful of clean sand, which insures proper drainage. After planting, rake the bed or border smooth, and after the ground has frozen tolerably hard in early winter, cover with a few inches of dry litter, leaves, evergreen boughs or coarse manure. If this covering be applied before freezing weather, it renders the bulbs liable to the predations of field mice, which may burrow in it.

FOR THE CULTURE OF HYACINTHS IN POTS, prepare the above compost, adding, if possible, a quantity of leaf mould. The most favorable time for planting is September, October and November.

The size of the pot depends on the number of bulbs planted in a single one; three or four bulbs in a pot of say six inches in diameter have a rich and massive effect; one or two bulbs in each may be planted in proportionately smaller pots—two bulbs in each are very effective, and are generally preferred. In potting, each bulb should remain two-thirds above the surface of the soil; when thus planted, water them well, to imbed the bulbs firmly in the soil, allowing them to remain in this condition one or two days; then bury the pots in the open ground to the depth of six inches for six weeks, in which condition the preparatory root-growth necessary to a vigorous development of their flower-scapes is made. After this period, take up the pots and remove them to a room not heated, but not so cold as to freeze. Being exposed to the light for the first time, they are, of course, very delicate. Care should, therefore, be exercised not to place them in the direct rays of the sun for two or three days. When about ready to flower, bring them to the ordinary living-room, where the warmth will soon cause them to bloom. By so bringing them out, a few at a time, you can secure a succession of beautiful flowers all winter. They will need occasional watering until they begin to grow, when they should have an abundance of air in mild weather, and plenty of water.

FOR CULTURE IN GLASSES, the bulbs should be so placed that only the base of each touches the water; then place them, for the first ten days, in a dark but cool closet or room, to promote the starting of the roots, after which expose them to the light and air as much as possible; *avoid placing them near gas-light!* The water should be changed as it becomes impure; draw the roots entirely out of the glass, rinse off the fibers in clean water, and wash the inside of the glass well. The water should never be allowed to freeze. When the bulbs are well advanced, give them a soft shower of rain water every day.

Persons unacquainted with the different varieties will do well to leave the selection to us, only specifying in their orders whether the bulbs are wanted for pot, glass or garden culture; we shall take pleasure in sending such varieties as will insure satisfaction.

The names of our Hyacinths and Tulips are those given to them in Holland, and all are true to these names.

SELECT NAMED HYACINTHS.

The Single-flowered varieties are mostly more effective than the Double ones, and, as a general rule, the former succeed better than the latter in glasses.

The Double varieties are distinguished by an asterisk (*).

All Single Hyacinths do well in water, and also the Double ones marked thus (**).

The sorts printed in boldface type are most largely used for bedding.

I: ordered by mail, please add 20 cents per dozen for postage.

EARLY ROMAN HYACINTHS.

Extensively used by florists for forcing, which may be done at a temperature of 60 degrees. Flowers pure white, very fragrant, and each bulb will throw up from three to four spikes. For forcing, three or four bulbs are generally planted in a suitable pot, in good soil (as recommended for other varieties). The pots must be kept in a cool and dark place until filled with roots, when the flower-spikes can be rapidly developed by exposure to light and moderate heat. The blue and rose Roman Hyacinths flower from one to two weeks later than the white variety.

If ordered by mail, add 10 cents per dozen for postage.

TULIPS.

Most of the varieties named below are equally well adapted either for pot-culture or the flower border. They are readily brought forward for early bloom in the house or conservatory, while, used on the lawn, they group admirably with other varieties of early bulbs, or form beautiful beds when massed in contrasting colors.

Tulips require cultural treatment very similar to Hyacinths, except that the bulbs, being smaller, must not be planted quite so deep.

EARLY-FLOWERING, OR BEDDING TULIPS.

Admirably adapted for culture in pots, edgings or beds; they flower immediately after the Duc van Thol varieties.

☞ Six of a kind at dozen rates, 25 at 100 rates.

If ordered by mail, add 5 cents per dozen for postage.

Tournesol. Double; red and yellow	8 . . .	05	50

PARROT TULIPS.

For outdoor cultivation. The petals of these have feathered edges, and in addition to other colors combine shades of green—a peculiarity confined to this class. The flowers are very singular and picturesque, of large size and brilliant color, and form very effective groups for the flower border. *Very late in flowering.*

Please note that our extra selected EARLY SINGLE and EARLY DOUBLE MIXED TULIPS, if planted in large beds, will produce an exceedingly beautiful and lively effect.

TULIP BEDS.

It is to be regretted that the gorgeous displays presented by the Tulip beds of our public parks should so seldom be seen on our private lawns. Tulips are so hardy and of such easy culture that failure to obtain satisfactory results is possible only by selecting unsuitable sorts. In order to obviate this difficulty, we give the following groups of sorts that bloom at the same time and are of equal height. Any of these groups will form an effective combination. Tulips should be planted 5 or 6 inches apart and about 4 or 5 inches deep to the bottom of the bulb. For culture, the directions given on page 2, for culture of Hyacinths, are applicable. After the Tulips have flowered, the beds can be used for bedding plants, such as Geraniums, etc.

GROUPS OF TULIPS THAT WILL FORM EFFECTIVE COMBINATIONS.

SINGLE TULIPS.	SINGLE TULIPS.	SINGLE TULIPS.
{ Duc van Thol, Scarlet. La Reine. L’Immaculee. Duc van Thol, Scarlet. Van der Helst. Proserpine. Pottebakker, Yellow. “ White. Artus. Cardinal’s Hat. Couleur Ponceau. La Reine. White Swan. Wouverman.	{ Gesneriana, Red. Ida, Pure Yellow. These two grow about 14 inches high. DOUBLE TULIPS. Rosine. Tournesol, Red. “ Yellow. Gloria Solis. La Candeur. Imperator Rubrorum.

It is advisable to order as soon as possible after receipt of this Catalogue, as later on in the season we may be sold out of some varieties owing to an unusual demand for them. In that case we shall substitute equally fine sorts of same color.

ARUMS.

A class of odd perennial bulbous plants, with peculiar and distinct foliage and flowers. They are of easy culture, requiring rich soil and plenty of water during their growing season. *A. dracunculus* is hardy, and a very curious species; the stalks of the leaves are spotted with brown and purple, like a snake. The others are not hardy, but should be potted in autumn and kept dormant till spring.

If ordered by mail, add 3 cents each for postage.

AMARYLLIS.

AMARYLLIS.

These bulbs, which are so remarkable for their beautiful flowers, should, most of them, be cultivated indoors, and but moderately watered, unless they show indications of flowering. The soil suitable for their culture is a good loam, with one-fourth part of leaf-mould or pulverized manure and a proportion of sand. Frequent disturbance of the roots is to be avoided.

CROCUS.

For pots and borders. A universal favorite, being one of the earliest flowers seen in the spring. They are neat, dwarf and compact in growth, and the blooms are of bright colors. If planted close—say 2 inches apart—and in close rows, they make a very pretty display immediately after the snow goes off in the spring. Do not disturb for several years.

For flowering in pots, hedge-hogs, baskets, etc., they should be plunged in the open ground for three weeks after planting, precisely in the same manner as directed for hyacinths.

If ordered by mail, add 15 cents per 100 for postage.

MIXED	05	30	1 75

CALOCHORTUS.

CYCLAMEN.

CULTURE OF THE PERSIAN CYCLAMEN.—When well grown it is difficult to find a more useful plant than this for greenhouse, room and window decorations. The various species produce flowers varying from deep red to pure white.

CYCLAMEN GIGANTEUM.

Cyclamens raised from seed, if well attended to, will flower within a year from the time of sowing. The seed should be sown in a well-drained pan, filled to within half an inch of the rim with good loam, leaf-mould, and plenty of sand; sow evenly, and cover with fine soil; water gently, and place in a temperature of 65 to 70 degrees; keep the soil moist, and as soon as the seedlings appear, raise the pan to a position as near the glass as possible, and shade from the sun during the middle of the day. When the plants have one leaf, lift them carefully, and pot singly into 3-inch pots, in the same soil as was originally used for sowing. Place them in a warm frame near glass, to prevent the plants from being drawn. Give a moderate amount of air through the day, but close early in the afternoon, and give the plants a gentle sprinkling overhead. When the pots are full of roots they will require shifting into 5-inch pots; the same compost will do, but some well decomposed manure may be added. All plants that are throwing up blooms should be placed in an airy position and attention paid to watering them. When the flowering is over, remove the plants to a coldframe and give water until the leaves begin to decay; then gradually withhold it, allowing the plants to rest until August. Then the established plants should be shaken out and repotted into

the same sized pot; place in a cool frame and keep moist and close for a few days until they commence to grow, when air should be admitted freely. By the middle of September they will be growing finely, and will come rapidly into blooming condition.

If ordered by mail, add 2 cents each for postage for those marked thus (*).

SEEDS OF CYCLAMEN GIGANTEUM.

The magnificent strain of the German Imperial Gardens, collected expressly for us. Best time to sow Cyclamen Giganteum is the autumn. The seed should be sown thinly on the surface, pressed into the ground and covered lightly. Light, sandy soil suits them best. A temperature of 55° is sufficient to insure germination. When seedlings appear, they should be brought near the light, and when large enough, pricked off—several in a 5-inch pot. **12 seeds in a packet.**

CROWN IMPERIALS.

FREESIA.

The justly popular *Freesias* are greatly prized for the delightful fragrance of their delicately colored flowers, which, when cut, will remain in good condition a long time in water. They are easily grown or forced in a light, sandy soil, in a frame or greenhouse, and are excellent for window culture in winter; one plant will perfume a large room, but not in the persistent manner of a tuberose. The plant has tooth-shaped bulbs and flat, spreading leaves. For the information of all not acquainted with these bulbs, we may say that they are quite small, and produce very large blooms in comparison to their size.

FREESIA REFRACTA ALBA.

If ordered by mail, add 3 cts. per dozen for postage.

Freesia refracta alba. Pure white, and sweet-scented; very largely forced. It is one of the prettiest bulbous plants known. The flowers are 2 inches long and about the same in width, shaped like miniature gladioli, and in clusters of 6 to 10, on depressed horizontal scapes. The body of the flower is pure white, with lower segments spotted

lemon-yellow. There is a peculiar delicacy and beauty about this flower that is all its own; the fragrance is remarkable and very lasting. 5 cts. each, 20 cts. per doz., 90 cts. per 100.

Freesia Leichtlinii. Creamy white, shading to yellow; a pretty sort, quite distinct in color. 5 cts. each, 25 cts. per doz., \$1.25 per 100.

GLADIOLUS.

The following varieties are the sorts generally to be had at this season of the year, and th usually planted in pots in autumn. and require to be kept in a cool room or greenhouse, & then

GRAPE, FEATHERED, ETC., HYACINTHS.

These little favorites are entirely hardy, and very pretty for the open ground or for pot culture.

If ordered by mail, add 15 cents per 100 for postage.

IRIS.

IXIAS.

The Named Hybrid Ixias are so beautiful and rich in tints that no lover of bulbs should be without them. They are equally adapted for pots or the open ground, exceedingly free-flowering, and invaluable for cutting. If planted out, they require rather more covering during winter than Hyacinths. In pots their culture is the same as that usually recommended for other bulbs. By reason of their curious forms and strange coloring, the Ixias everywhere attract much attention.

IXIAS.

If ordered by mail, add 3 cents per dozen or 13 cents per 100 for postage.

Odorus rugulosus. An improved Campernelle; deep yellow, large crinkled flowers; very fragrant.	05	25	1 25
Large Double. Yellow	08	60	4 00

LILIES. (LILIUM.)

These require very little care. The principal thing, indeed, to be attended to is to forbear disturbing them too often. *L. auratum* cannot bear manure; ordinary light soil suits them best. We call particular attention to the *L. speciosum* (Japan Lilies), which are, next to *L. auratum*, the most magnificent species. Lilies should be planted *deep*, not less than six inches, and, although hardy, are benefited by a light covering.

Most of these Lilies are not ready for shipment until after frost.

If ordered by mail, add 3 cents each for those marked thus (*); others from 1 to 2 cents each for postage.

	Each	Per doz.	100

NERINE.

(GUERNSEY LILY.)

These bulbs should be cultivated in pots, in light, sandy soil, and to promote their flowering, a vigorous growth of leaves must be encouraged in the autumn ; the requisites are, warmth enough to excite them, and air to prevent their growing weak. They are very interesting and handsome in flower, and not as well known as they deserve.

If ordered by mail, add 2 cents each for postage.

	Each	Per doz.
Crispa. Scarlet ; very pretty	\$0 45	\$4 50

SNOWDROPS.

(*Galanthus nivalis*.)

Perhaps no spring flower is a more general favorite than the Snowdrop. The earliest flowering of its varieties is the common single sort, which is also very graceful and beautiful, commencing to bloom before the snow is fairly off the ground in the spring. This is succeeded by the double-flowered variety, with its elegant drooping snow-white blossoms.

If ordered by mail, add 3 cents per dozen, or 25 cents per hundred for postage.

HARDY FLOWERING SEEDS.

For Autumn Sowing.

Many varieties of Flower Seeds, ANNUALS as well as BIENNIALS and PERENNIALS, may be sown in the open ground in the autumn. We give here a list of such as will succeed in this latitude and southward. The plants from autumn-sown seed become larger and more robust, flowering earlier and more numerous than if sown in spring.

	Per pkt.	Per oz.
Acanthus mollis . White flowers ; ornamental foliage	\$0 05	\$0 40
